SpiritAnimal: PeriwinkleOpossum

The photo I have chosen for the challenge is of a plant with pointed leaves. This plant has its leaves growing in a different sequence. This is also so intriguing once who closely look at the pattern of the leaves on the stem. The plant in the photo is from the front porch of my house.

This photo provides us with different data which I am going to formulate into information looking at closely accordingly to me. As we look at the leaves on the plant we can see how it has grown. The leaves on the middle are longer, stronger and greener and the leaves that follows are as green, longer or stronger as in the middle. The condition is the position of the leaves on the plant and the amount of nutrition it receives from the steam of the plant. The other case is the sunlight received that is the top or the middle part enjoys plenty of sunlight whereas the bottom as very less amount of sunlight.

There is also certain pattern to the leaves. It has an increasing number of leaves in the row as it progresses down from the top. This is impressive. I think I wouldn't have ever looked so much at this plant if it was not for this assignment. I am happy that I looked at it now. Thus, nature indeed as lots of data.
